

Blaze Web Works Internship Programme

WELCOME AND ORIENTATION

1. Opening Welcome

Good morning everyone,

Welcome to the Blaze Web Works internship programme. We are very happy to have you with us and we are looking forward to working with you over the course of this internship.

This programme is designed to give you practical exposure to real-world projects, real project expectations, and the kind of teamwork that happens in a professional working environment.

The goal is not for you to know everything already. The goal is for you to learn, participate, ask questions, grow your confidence, and gain experience that will help prepare you for your future career.

2. Purpose of the Orientation Session

Today's session is about helping you understand:

- What Blaze Web Works does
- What the internship is about
- What projects you will be introduced to
- What will be expected from you
- How we will communicate and manage tasks
- How teams will be allocated
- What tools and technologies you should start learning
- How we will handle exams, study commitments, and availability

By the end of the session, you should have a clearer idea of where you fit in, what you can expect, and how to prepare yourself for the work ahead.

Blaze Web Works
IT SOLUTIONS COMPANY

3. Introduction to Blaze Web Works

Blaze Web Works focuses on creating practical digital solutions for real business needs.

Our work involves areas such as:

- Software development
- Web applications
- Business systems
- User interface and user experience design
- Workflow planning
- Automation
- Project documentation
- Digital transformation
- System security awareness
- Client-focused problem solving

During this internship, you will be exposed to more than just technical work. You will also learn how projects are discussed, planned, broken down into tasks, reviewed, improved, and delivered.

4. Internship Vision

The vision for this internship is to give you meaningful exposure to a real working environment while helping you develop the skills and habits you will need in your future career.

This internship is about:

- Learning how real projects work
- Understanding how different roles work together
- Developing professional communication habits
- Learning how to take responsibility for assigned tasks
- Building confidence in your chosen field
- Understanding how to receive and apply feedback
- Creating practical experience you can carry forward

You will be working around real project ideas, not just classroom exercises. That means the work will involve uncertainty, changes, feedback, planning, and problem-solving.

That is part of the learning process.

5. Internship Expectations

You are not expected to be experts from day one. However, you are expected to approach the internship with professionalism and commitment.

The main expectations are:

- Attend scheduled sessions and meetings
- Be on time
- Communicate if you are unavailable
- Ask questions when you do not understand something
- Let the team know early if you are stuck
- Complete assigned tasks as best as you can
- Keep your work organised
- Respect project confidentiality
- Use the correct tools and processes
- Be willing to learn
- Be open to feedback
- Work respectfully with others
- Take responsibility for your own growth

A big part of this internship is learning how to behave and communicate in a professional project environment.

6. Communication

Good communication is one of the most important skills you can develop during this internship.

You should communicate clearly about:

- What you are working on
- What progress you have made
- What you are struggling with
- What you need help with
- Whether you are available or unavailable
- Whether your task is complete or still in progress

Please do not wait until the last minute to say that you are stuck. In a professional environment, it is better to communicate early than to stay silent.

Asking questions is not a weakness. It shows that you are trying to understand and improve.

7. Teamwork

Real projects are rarely completed by one person alone.

During this internship, you will be working with people from different study areas, including:

- Software development
- Software engineering
- Cyber security
- CAD design

Each role contributes differently to a project.

Software students will focus on systems, code, databases, and workflows.

CAD students will focus on planning, space design, and technical drawings.

Cyber security students will focus on risk, access control, safe handling of data, and security awareness.

The purpose is for you to see how different roles connect in a real project environment.

8. Task Management

Tasks will be broken down into smaller pieces so that they are easier to understand, assign, complete, and review.

When you receive a task, make sure you understand:

- What needs to be done
- Why it needs to be done
- What the expected outcome is
- When it should be completed
- Where the work should be saved or submitted
- Who to ask if you need help

For software-related work, GitHub will be used for version control.

Software students will need to learn how to:

- Clone a repository
- Create a branch
- Make commits
- Push changes
- Open pull requests
- Respond to review feedback
- Avoid overwriting another person's work

Good task management is not only about doing the work. It is also about keeping others informed and making your work easy to review.

9. Exams, Study Balance, and Availability

If you are writing exams or have important academic commitments during the internship, please let us know in advance.

We will work around your exam schedule as far as possible.

The internship is important, but it should not create an unhealthy imbalance between your studies, work responsibilities, and personal well-being.

The key requirement is communication. If we know your availability early, we can plan your tasks properly and make sure expectations remain fair and manageable.

Please do not wait until a deadline or meeting to mention that you are unavailable because of exams or study responsibilities.

10. Introduction to the Two Major Projects

During the internship, you will be introduced to two major projects.

Project 1: Synergy Inc.

Synergy Inc. is an architectural and business development project focused on planning a multi-purpose business centre.

The property will include:

- Offices
- Restaurants
- Doctors' rooms
- Mechanical workshops
- A diamond cutting house
- A gold refinery
- A jewellers hub
- An auction house

This project will involve a combination of business planning, CAD work, design, branding, layout thinking, digital presence, and possible software or security-related planning.

Students who will be involved in this project include:

- CAD designers
- Software students assisting with digital concepts
- Cyber security students assisting with data and system safety considerations

Blaze Web Works
IT SOLUTIONS COMPANY

Project 2: Blaze Diagnostics App

The Blaze Diagnostics App is a software system being developed for mechanical workshops.

The goal of the system is to improve communication between workshops and their clients.

The system will help clients receive clearer updates about:

- Vehicle job progress
- Quote approvals
- Parts ordered
- Parts delivery updates
- When the mechanic is working on the vehicle
- When the vehicle is ready
- Invoicing
- Workshop communication

The technology stack for the Blaze Diagnostics App includes:

- TypeScript
- Next.js
- Tailwind CSS
- PostgreSQL
- Drizzle ORM
- GitHub for version control

Students who will be involved in this project include:

- Software developers
- Software engineers
- UI/UX designers
- Cyber security analysts

11. Initial Team Allocations

Team allocations will be based on:

- Your course
- Your current year of study
- Your current skill level
- Your learning goals
- Your interests
- The needs of each project
- The type of work available

The aim is to place each student where they can learn, contribute, and gain useful practical experience.

Some students will work mainly on one project, while others will assist across both projects depending on their role and the needs of the team.

Team allocations will be discussed after the project briefings so that everyone understands the projects before being placed into groups.

12. Tools, Accounts, and Resources

All interns should start becoming familiar with the tools and resources relevant to their group.

Common Tools for All Interns

All interns should become familiar with:

- GitHub
- Shared documentation folders
- Communication channels used by the team
- Task management processes
- Basic documentation standards
- Progress reporting
- Professional communication

Software Developers and Software Engineers

Start learning or revising:

- Git and GitHub
- HTML, CSS, and JavaScript
- TypeScript
- React
- Next.js

- Tailwind CSS
- PostgreSQL
- Drizzle ORM
- REST API concepts
- Environment variables
- Debugging
- Pull requests and code reviews

CAD Design Students

Start learning or revising:

- CAD fundamentals
- 2D layout drafting
- Floor plan concepts
- Layers and line weights
- Dimensions and annotations
- Space planning
- Presentation drawings
- Exporting drawings for review
- Practical flow between different spaces

Cyber Security Analysts

Start learning or revising:

- Web application security basics
- OWASP Top 10
- Authentication and authorization
- Password security
- Role-based access control
- API security basics
- Secure handling of customer data
- Avoiding secrets in GitHub repositories
- Basic database security awareness
- Security reporting

13. Professional Conduct

During the internship, you will be expected to conduct yourself professionally.

This includes:

- Respecting other team members
- Being honest about progress
- Communicating problems early
- Not sharing confidential project information
- Not sharing login details or passwords
- Not making unauthorised changes
- Not working directly on production systems unless specifically instructed
- Taking feedback seriously
- Treating the internship as a real learning opportunity

Professional conduct is just as important as technical ability.

14. Closing Message

This internship is an opportunity to learn through real work.

You will be guided and supported, but you will also need to take responsibility for your own development.

Use this opportunity to ask questions, build confidence, improve your skills, understand how real projects work, and prepare yourself for your future career.

We are looking forward to working with you and seeing how you grow during your time with Blaze Web Works.
